Coppeler Heating & Electric's HOMEsense

Smart & simple ways to enrich your home living.

— IT'S ABOUT TIME! —

The Benefits of Tune-Ups Add Up

How would you like to use less energy in your home, stay more comfortable, breathe safely and save money over many years? These are the perks you'll enjoy with regular maintenance on your heating system.

Your home comfort system's annual check-up is more than a household chore. It's the best step you can take to lengthen the life of your equipment. Routine maintenance helps keep your system running well through winter – which also helps you avoid the headache (and frigid temperatures) of an untimely breakdown on the coldest night of the year. In fact, most of the breakdowns we see can be traced to a lack of maintenance.

Notably, this annual appointment is a tiny fraction of what it would cost to replace a home comfort system before it's time. Similar to

maintenance on your car, if you take care of it, it lasts much longer.

With a professional tune-up, your system not only runs more reliably, it also runs more efficiently – which saves you on energy dollars. Dust, dirt and other airborne particles build up over time. As the dirt and dust block air flow and force your system to work harder, it uses more energy to keep you warm.

Even more important than reliable operation and energy savings is the potential for life-saving detection of dangerous carbon monoxide leaks. CO is an odorless, colorless, tasteless gas that is toxic to humans and can cause serious illness or even death when people are exposed to high levels. Be aware that a faulty heating system can pump this poison into your home.

Please call to schedule a tune-up on your system.

MY WORD

BY MARK COPPELER

Hello
Friends,

Fall is a time when the days start to shorten and the weather starts to cool, but life is as busy as ever.

Experiencing a system breakdown is not usually anyone's idea of a fun time. We understand. That's why we work to respond quickly and get you up and running as soon as we can. Even better, there's an important step you can take to help avoid problems altogether.

Have You Checked Your Roof Lately?

— HOT NEWS NOW —

Proper Installation Impacts Your System's Performance

A new heating and cooling system is a significant investment for any homeowner, and quality installation is part of making sure that investment provides the right return in comfort, performance, energy savings and safety. Unfortunately, according to industry sources, equipment that isn't installed correctly can lose about half of its efficiency.

Let's say a contractor suggests replacing the outdoor unit but keeping your indoor unit in place (or vice versa). You might think, "Great, I'll save money!" However, that's a shortcut that's not going to serve you well because the outdoor compressor and indoor unit are intended to work

together. If they're mismatched, they won't be able to operate at optimal efficiency.

Sizing your equipment right is also essential to a quality installation. An oversized system may cycle on and off needlessly – resulting in less comfort and shortened equipment life. Industry guidelines say a variety of factors, including the size of the home, the amount of insulation and the need for ventilation, are part of calculating your heating and cooling needs.

Proper installation also ensures better indoor air quality. IAQ is a significant issue, especially when family members suffer from allergies, asthma or respiratory issues. More concerning, carbon monoxide leaks from improper installation could seriously endanger your family's health.

To discuss upgrading your heating and cooling system, give us a call. Quality installation is important to us, and so is your comfort.

Wind, rain. Heat, cold. Exposure to weather takes a toll on even the best-built homes, especially your roof. Think about it. Your roof has a big job to do protecting your home and family from the elements, and it can take on quite a lot of wear and tear. Eventually, your roof just wears out. But how do you know when it's time to replace your weather-worn roof or make a repair?

First, how old is it? Age is key in roof replacement. An asphalt shingle roof could last around 15-30 years,

Get Your Furnace Checked

Call for a pre-season tune-up, and get your furnace ready for an active winter. Annual maintenance lengthens equipment life, improves energy efficiency and helps prevent dangerous risks such as carbon monoxide leaks.

Plus, you can join our Comfort Club to save on this tune-up and future ones, too. Call **Coppeler Heating & Electric** today at **419-732-7995**.

— TAKE THAT! (AND THIS TOO!) —

Does Your Wall Color Bring You Down?

People have an emotional connection to color, and that includes the palette across your walls. When it's time to

upgrade your interior paint, think about the tone you want to set and let that guide your aesthetic. For example, yellow shines cheeriness and optimism, which brightens up a breakfast room. Orange is warm and inviting – a good choice for gathering rooms. Blue seems restful, calm and

yet there are a number of factors that impact how well a roof ages.

Hot summers, harsh winters, wind damage and poor attic ventilation can shorten a lifespan, for example. Shingle quality, shingle color (lighter lasts longer) and roof slope (allowing water to run off) could also have an impact.

Because lifespan varies, it's a good idea to inspect your roof regularly, and fall is a good time to do so. Make sure your roof is in good shape for the months ahead by checking for shingles that are curling, cupping, splitting or even losing granules.

Take note too if any shingles are missing. A shingle that is missing for a while can make other shingles vulnerable to damage, and if you catch a problem early enough, you may be able to avoid premature replacement. If you see signs of damage, check with a qualified roofer. The sooner any potential problems are detected and corrected, the longer your roof lasts.

soothing in a bedroom. Green offers a sense of balance and peace, perhaps good for a study. Red is associated with high energy and is best as an accent color. Whites and neutrals give off cool, refreshing impressions.

Soup's On!

How about a delicious bowl of fall flavors made from one these two simple soup recipes?

Easy Broccoli and Cheese –

Combine 10-12 ounces of cooked broccoli in a pot with a family-size can of cream of chicken soup and a cup of milk. Heat until warm, then add 2 cups of shredded cheese. Stir and heat until the cheese is melted and the soup is hot. You can adjust the amounts of broccoli or cheese to your own preference.

Simple Vegetable Soup – In a large pot, combine a

46-ounce can of tomato-vegetable juice cocktail, a 14.5-ounce can of diced tomatoes with green chili peppers, two drained 15-ounce

cans of mixed vegetables and a 15-ounce can of kidney beans. Then add two potatoes, peeled and cubed, plus vegetables or beef if you prefer. Stir and simmer on medium to low heat for half an hour.

— THE GOOD LIFE —

Enjoying Fall With Fun Times at Home

Fall is a busy season with lots of time spent on the go. So when you get a chance for downtime, why not enjoy a few fun activities at home? Try these ideas for a little fall fun:

- Build your family bond with a backyard campfire. Gather family for an evening out in your own backyard. Snack on

s'mores, roast hot dogs and tell ghost stories.

- Have a baking day. Fill your home with the aroma of fresh baked bread, cookies or cakes. Trying more challenging recipes can be a fun learning experience. Share the results with friends or take them to senior citizens who aren't able to leave home.
- Make fall crafts, such as a leaf and crayon press. Gather a pile of fall leaves. Arrange leaves on wax paper. Use a cheese grater to shave colorful crayons onto your leaves (remove wrapper first). Then top with another piece of wax paper and press with an iron set on low.

FAST FIX

Honey for pain relief? Honey isn't just delicious, it's useful for first aid. If you get a minor burn from touching a hot pan, a dab of honey can help. It has natural antifungal, anti-inflammatory and antibacterial qualities. Run cold water over the affected area, let it dry, then apply honey on the spot. This remedy won't help more serious burns but provides quick relief for a minor one.

How *Smart* Is Your Thermostat?

Smartphone technology has changed home comfort – because now you can change the temperature setting for your home wherever you are.

When you upgrade to a Smart thermostat that's Wi-Fi enabled, you can check in with your heating and cooling system through a smartphone, tablet or computer browser anywhere you go. With this ultimate comfort convenience, you can change

temperature settings while you're at work, when family's arriving home, when you're returning from vacation or from any room in the house.

What's more, you can receive reminders to change filters, get alerts about home temperatures and check weather conditions.

Call **Coppeler Heating & Electric** at **419-732-7995** by **November 30, 2018** and save 10% off the installation.
